HTTP

- HTTP stands for Hyper Transfer Protocol.It is a communication protocol used to transfer data between a web browser and a web browser.
- Does not encrypt the data.
- Data can be read or modified by attackers during transmissions.
- User port number 80 by default.
- Simple communication protocol.
- Less encryption overhead.

HTTPS

- HTTPS stands for Hypertext Transfer Protocol Secure. Itis a secure version of HTTP that protects data transferred between a browser and a web server.
- Encrypts the data using SSL/ TSL to protect sensitive information.
- Protects information such as passwords,personal details,and payment information through encryption.
- Uses port number 443 by default.
- Provides secure communication.
- Protects user privacy.
- Helps build user trust.
- Supports secure online payments.
